

SUPPORTING ANALYTICS THAT SCALE

CONSIDERATIONS FOR A MODERNIZED ANALYTICS SANDBOX

Tim Trussell and Antoni Dzieciolowski
Specialists, Data Sciences, SAS Canada

DECISIONS AT SCALE

- More Models
- More Granular Segments
- More Predictive Machine Learning Algorithms
- Model Tournamenting
- Enable Non-Technical Users

Automation

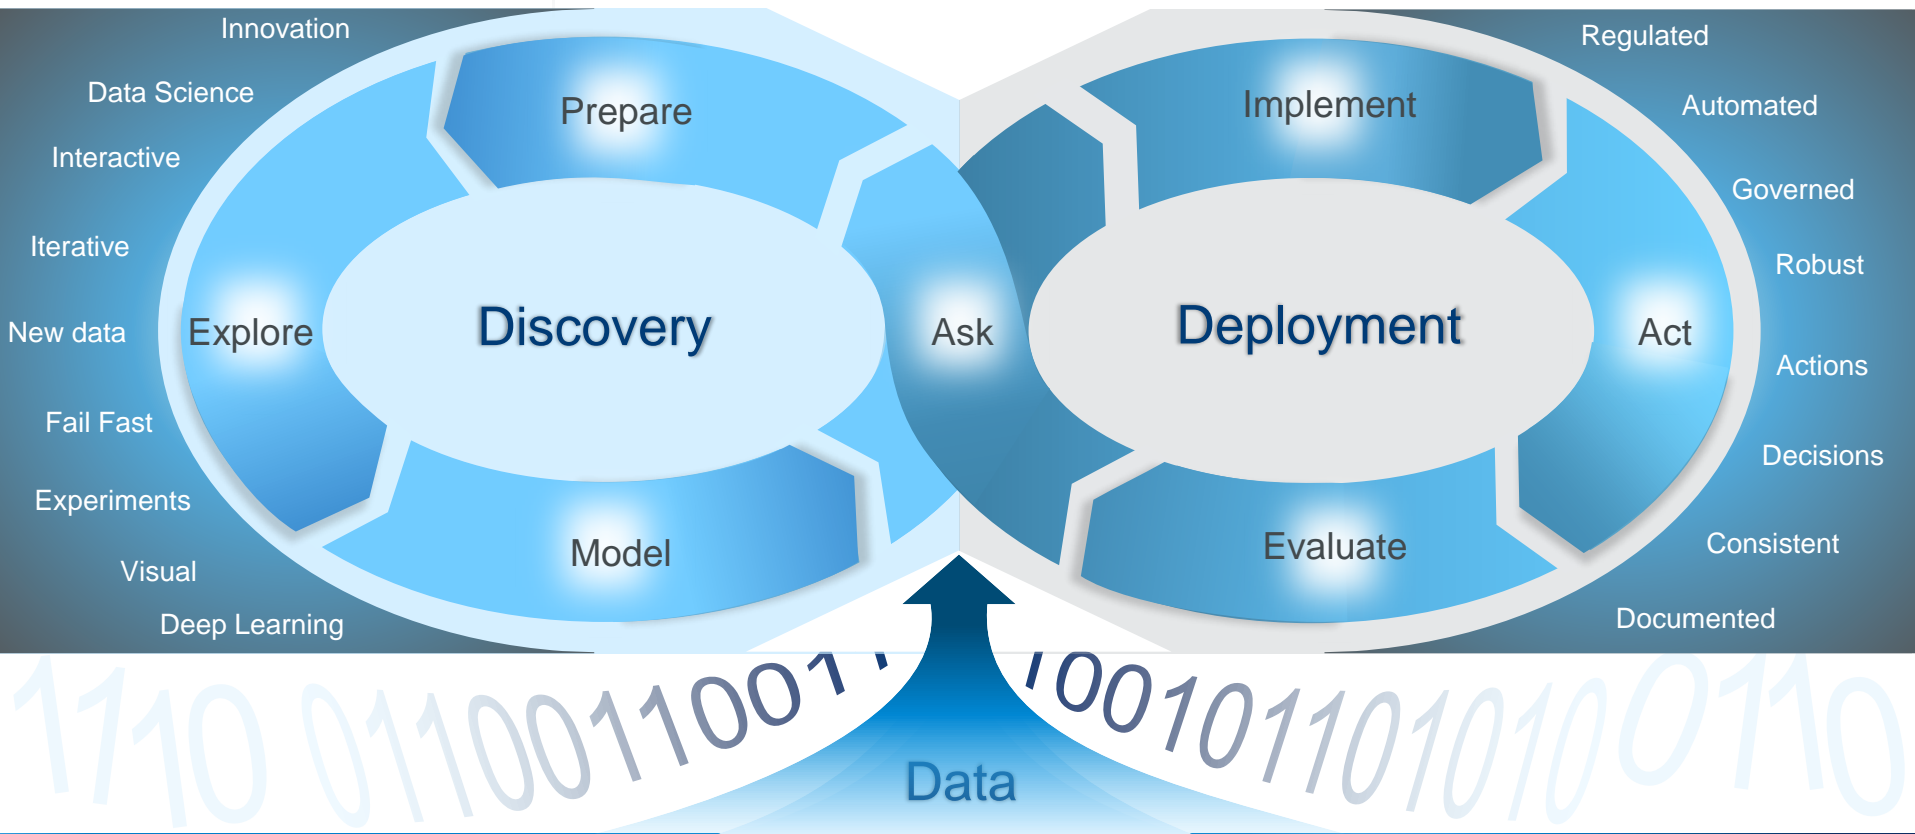

- Integration
- Embedded Analytics
- Move Insights Closer to the Decision Maker
- Combine Models with Business Rules

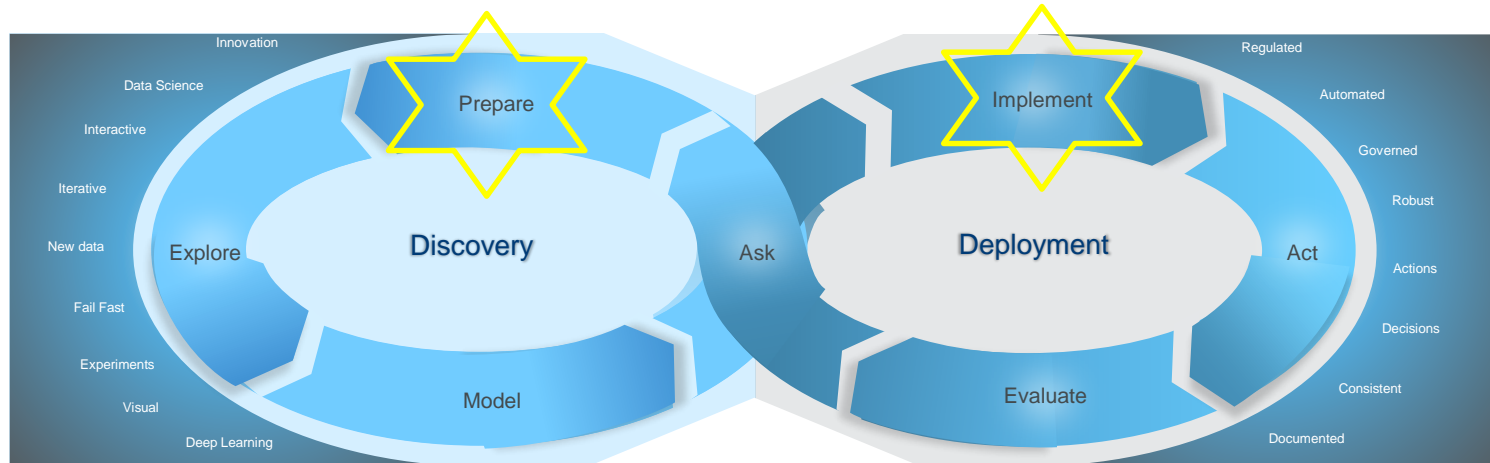

- Using ALL the Relevant Data
- Creating More Attributes

ANALYTICS LIFECYCLE

SCALE OUT THE ENTIRE LIFECYCLE

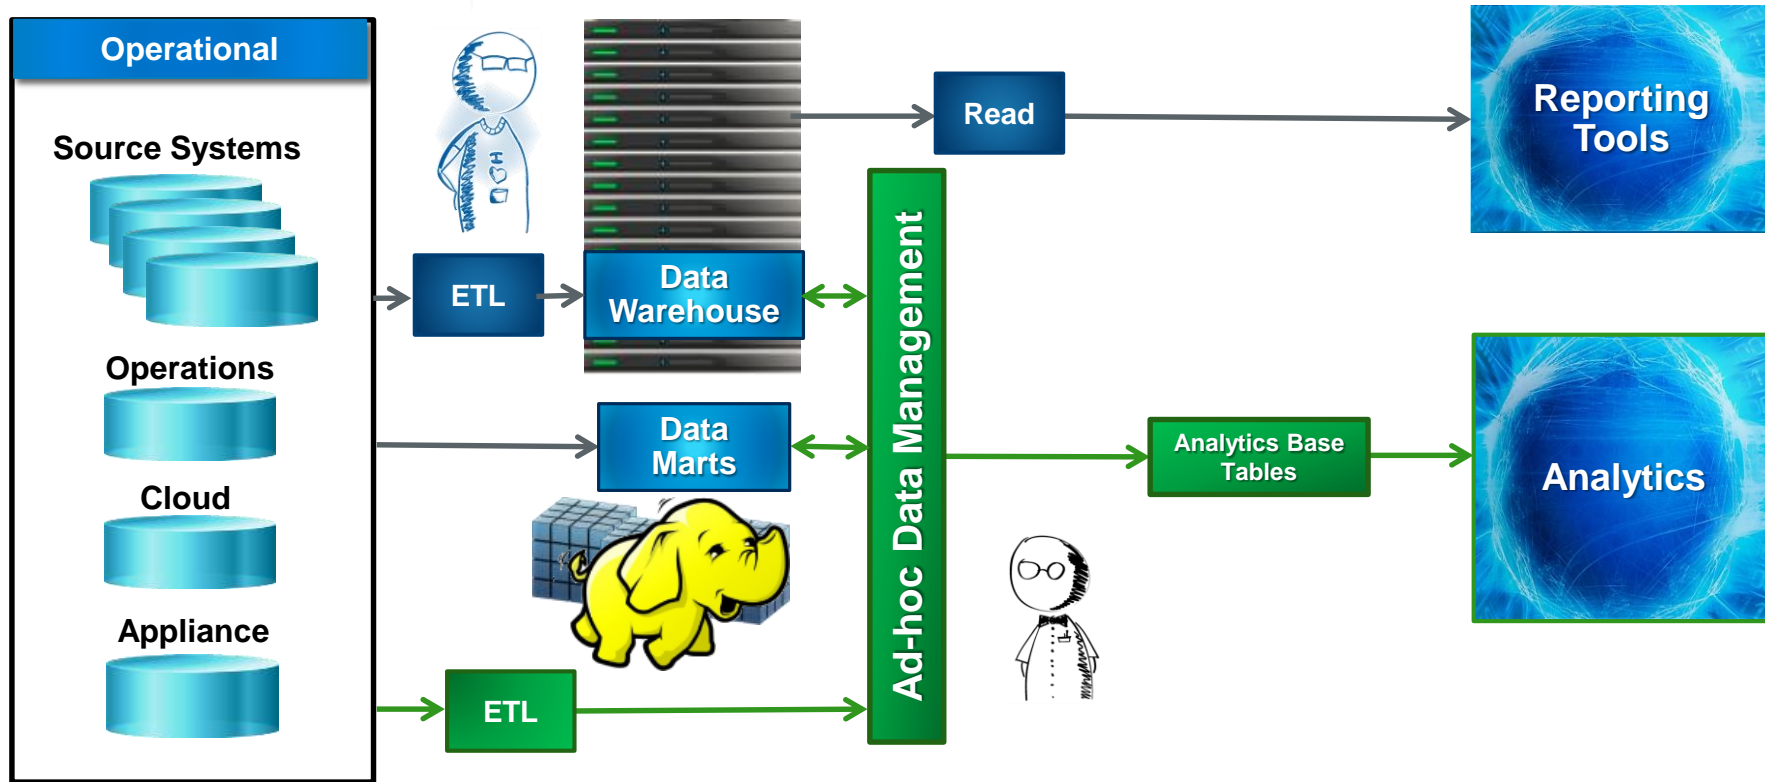

AT SCALE DATA

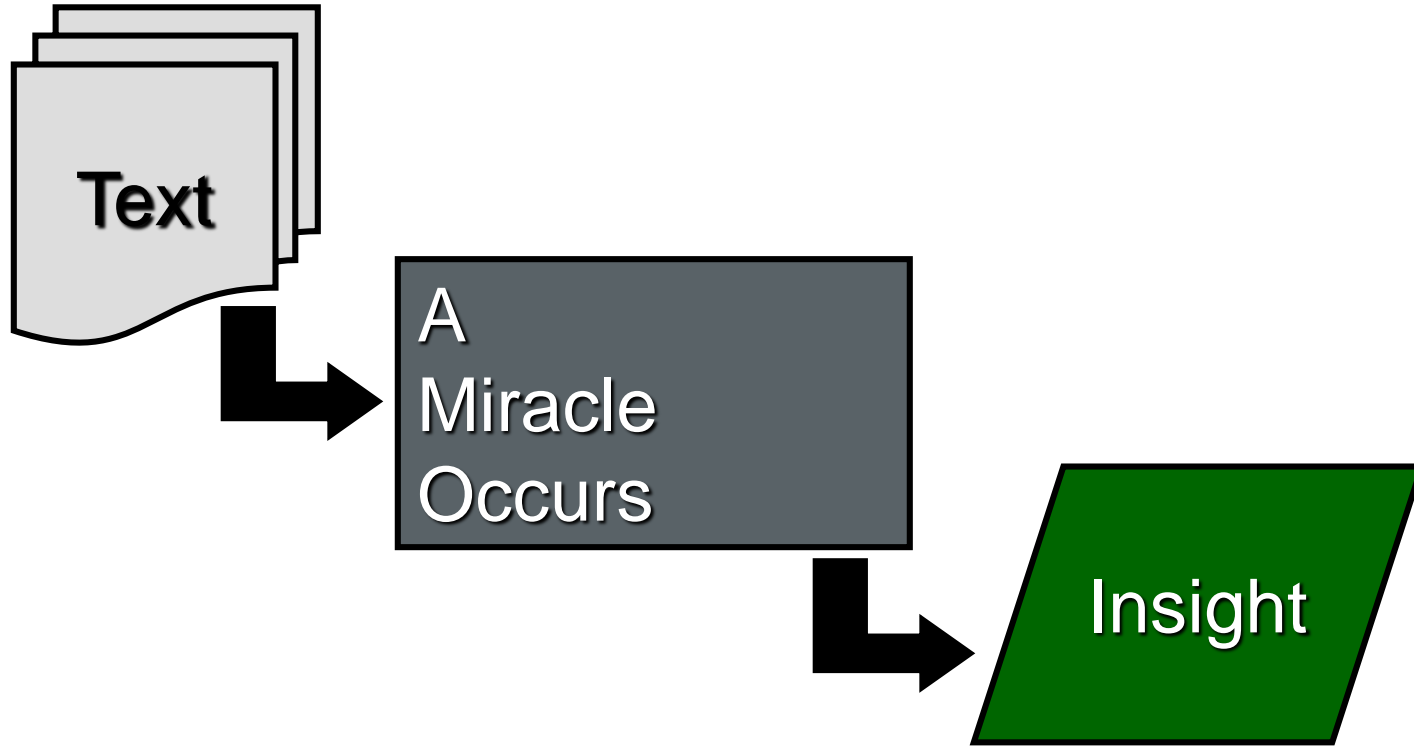

MANAGING ANALYTIC DATA

AD-HOC ANALYTIC DATA PREPARATION

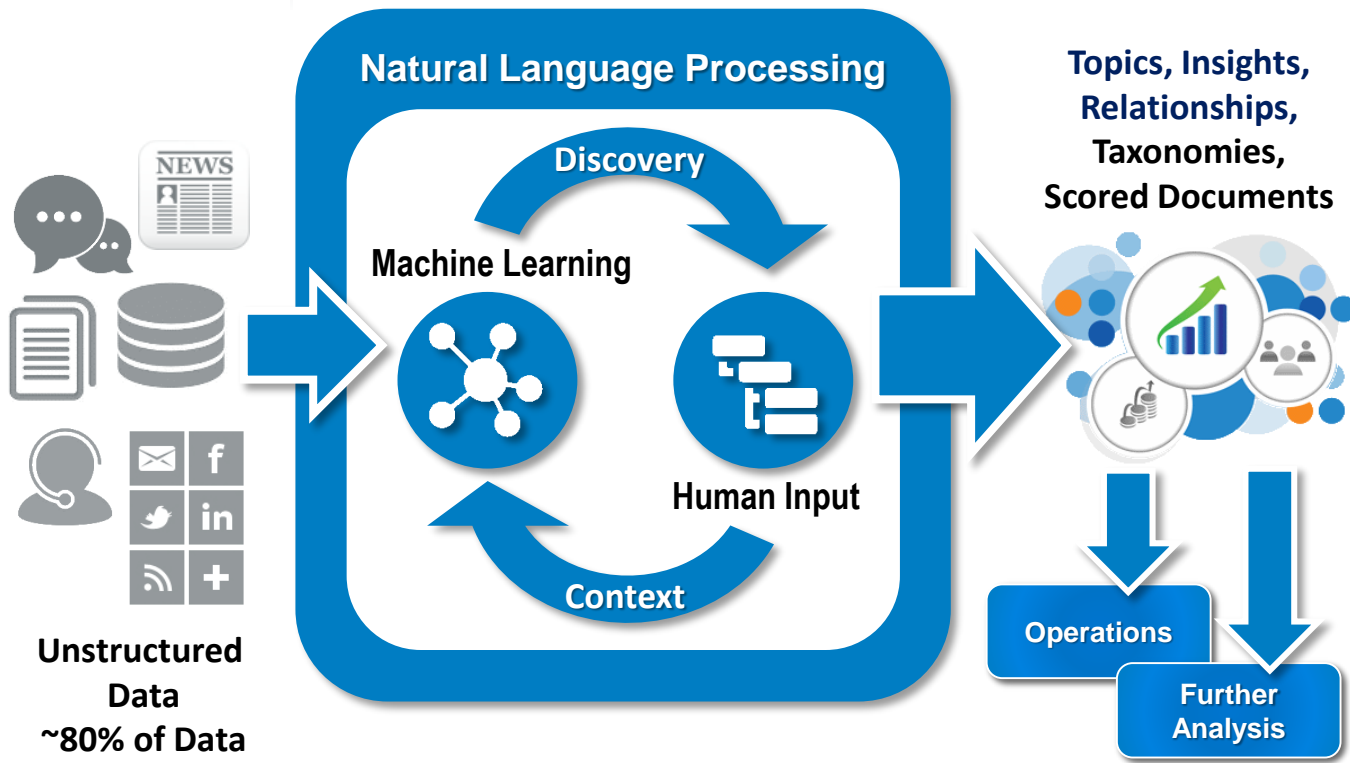

THE CHALLENGE OF UNSTRUCTURED DATA

AT SCALE EXPLORATION

ANALYTICAL EXPLORATION

DEMO

VISUAL ANALYTICS – KEY BENEFITS

Business Users

- Improves information sharing collaboration and decision making
- *Broadens the use of analytics and drives more informed decisions across the entire business*
- Provides rapid insights for business people on the go, via the Web and iPad

Analysts

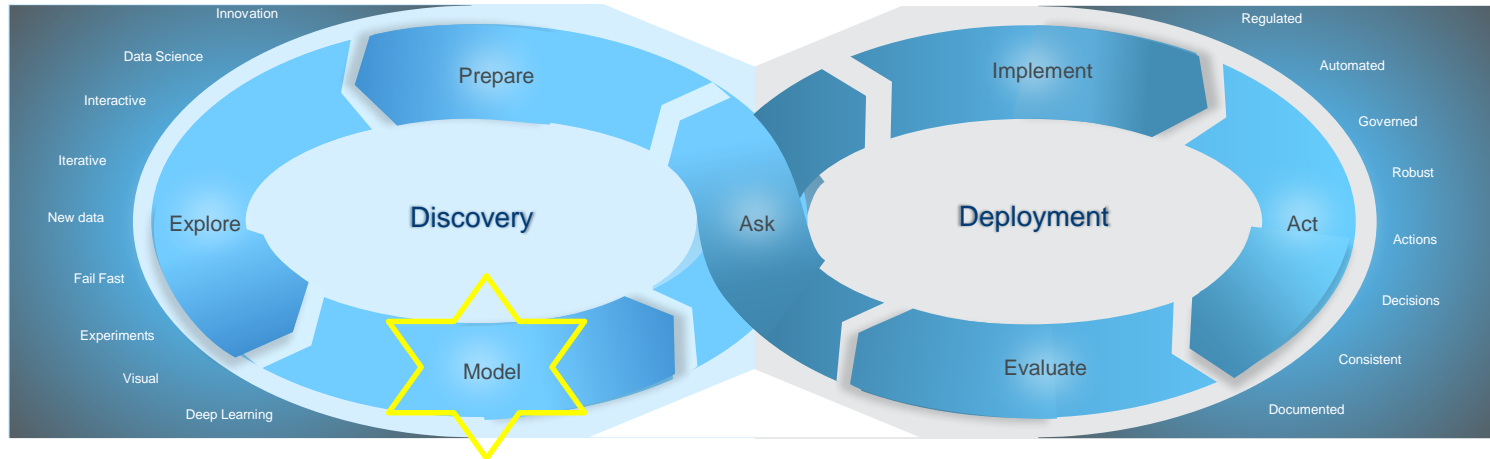

- *Rapid exploration on vast amounts of data accelerates the model development process by quickly identifying new areas of opportunity*
- Access to all of the data, rather than subsets, provides the flexibility to think/explore freely without dependencies on new views of data
- An equation is worth a hundred words. Picture is worth a thousand words

IT

- Liberates IT to focus on more strategic initiatives by providing an easy to use, self service data exploration model to business users
- *Maintains control and governance of data while empowering business users to have easy access to all of necessary data*
- Highly scalable solution, using commodity hardware, provides easy and cost effective growth

AT SCALE MODEL GENERATION

SCALABLE ANALYTICS

Automation
Scalability

SAS Factory Miner

- Automated Modeling / Segmentation— 1,000's of models, model history
- APIs
- Big data

Enterprise Miner

- Full-scale data mining and machine learning, hundreds of options to customize
- Productivity (self-documenting) and operationalized / reusable analytics

Rapid Predictive Modeler

- Easy-to-use, 3 clicks, automated approach.
- Few options to customize
- Data mining process generated behind-the-scenes.

Visual Analytics / Visual Statistics

- Exploratory modeling, part of VA experience.
- Part of pattern discovery process, less about automation/conversion to production
- Fewer modeling options, data prep, transformations – mainstream algorithms

SAS Enterprise Guide

- Procedures, Data Step
- Tasks, Code generation
- Learning/Teaching

Model Manager

- No model building
- Model lifecycle management
- Model profiling
- Workflow support
- Overlay with business rules and decision flows
- Manages R, PMML, EM, RPM, STAT models
