

UPDATE FROM SAS

MATT MALCZEWSKI, SAS CANADA

Your Trial, Your Data

Visual Analytics – [Register for Trial](#)

- Smart data exploration with self-services analytics makes this product usable for anyone. Interactive reporting makes it collaborative. Scalability and governance make it fit the needs of your organization, no matter the size.

Visual Statistics – [Register for Trial](#)

- Multiple users can explore and visualize data, then interactively create and refine descriptive and predictive models. Distributed, in-memory processing reduces model development time so you can run complex analytic computations – and get precise results – in minutes.

ACKNOWLEDGEMENTS

5 OPEN SOURCE MYTHS

the open source myth...

...and the reality

It's free.

Licensing is free: that's it.

It's 'Geekware'.

At first... but not over time.

It's 'not ready' for the Enterprise.

2010: 42%. 2015: 78%¹

It's hard to support.

Strength of community!

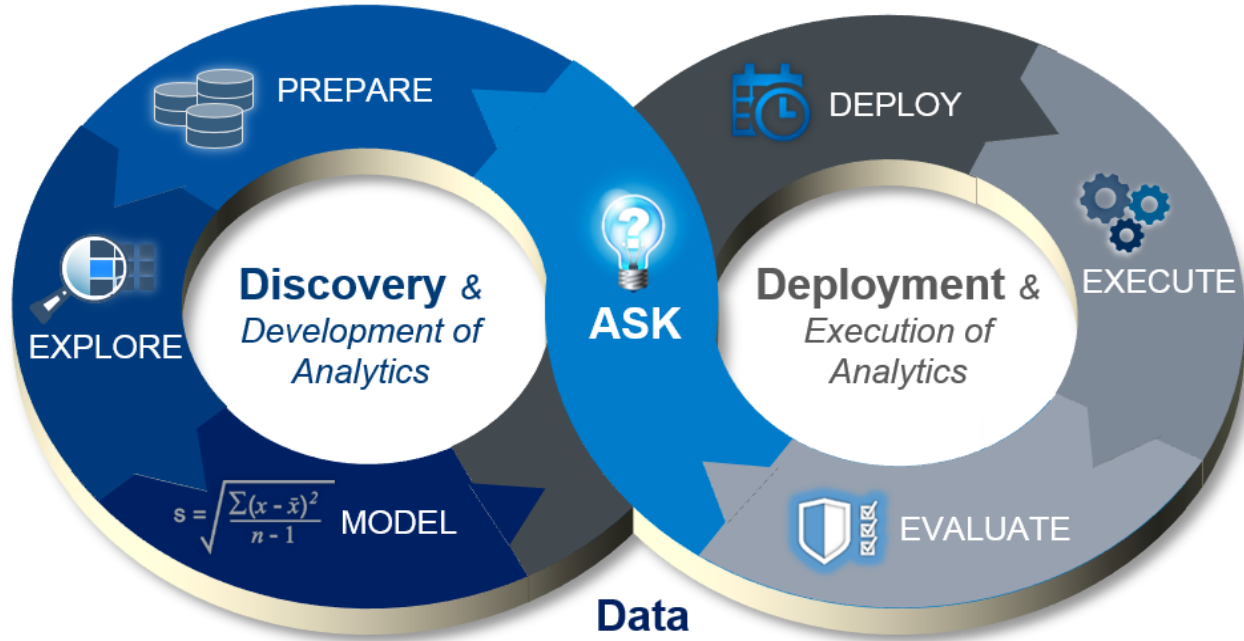

It's not secure.

55% believe it's *more* secure.¹

COMPARISONS

- **Open Source Offers:**

- + A robust online community.
- + An extensive array of algorithms.
- + Low cost barriers to entry.
- + Fast adoption of new innovation.

- **SAS Offers:**

- + Productivity for users regardless of skillset.
- + Scalability to address any problem or dataset.
- + Governed analytics and data.
- + The support organizations require for production and operational analytics.

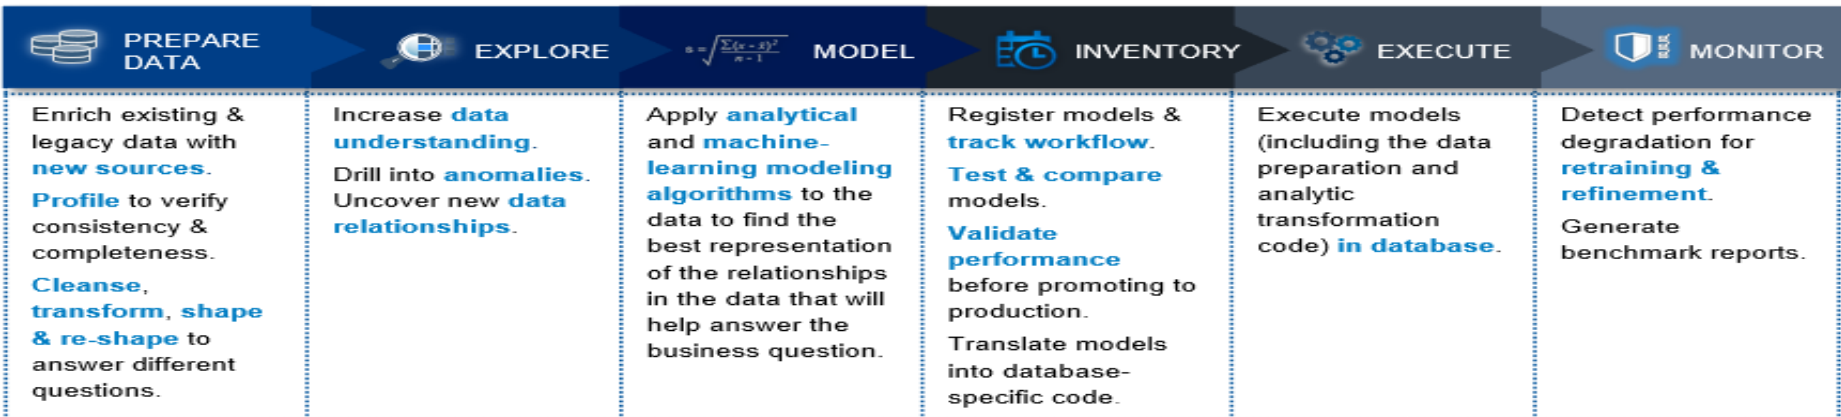

OPEN SOURCE REVOLUTION....

... means the evolution of SAS to ***embrace*** and ***extend*** the capabilities of open source as part of an analytics ecosystem.

SAS & Open Source Work Together to Create an Enterprise Analytics Platform

Discovery & Development of Analytics

Deployment & Execution of Analytics

SAS

OPEN SOURCE

A Diverse & Changing Analytics Ecosystem

It's about SAS **AND** open source, in a complementary partnership to create an **enterprise analytics ecosystem**.

	OPEN SOURCE	SAS EXTENDS	RESULTS
PREPARE DATA	●	<ul style="list-style-type: none"> + Native access to all data including Hadoop. + Ability to run key analytic functions in-database to reduce data movement. 	<p><i>Work with more data, identify new patterns and anomalies and uncover new insights.</i></p> <p><i>Minimize movement of data increasing performance.</i></p>
EXPLORE	●	<ul style="list-style-type: none"> + Allow non-technical users to get started with the data in a visual interface. + Embedded data preparation. + Data quality and governance. 	<p><i>Give more people access to data stored in Hadoop.</i></p> <p><i>Provision trusted, high-quality data for all.</i></p> <p><i>Improve governance by working with data inside Hadoop.</i></p>
MODEL	●	<ul style="list-style-type: none"> + Code-based and visual user experiences provide flexibility and productivity. + Approachable analytics designed for non data scientists. + Robust algorithms that scale to all data. 	<p><i>Democratize analytics.</i></p> <p><i>Free up data science resources and solve more complex business problems by shortening model development time.</i></p> <p><i>Increase model accuracy by using all your data – not just a sample – and running more iterations, more frequently.</i></p>

	OPEN SOURCE	SAS EXTENDS	RESULTS
INVENTORY	●	<ul style="list-style-type: none"> + Model management platform to inventory all models - SAS and Open Source. + Collaborative modeling environment. + Documentation, versioning and model lineage. 	<p><i>Manage analytics as an enterprise asset.</i></p> <p><i>Run your business on fact-based decisions.</i></p> <p><i>Create trusted models with visibility.</i></p> <p><i>Manage risk and compliance.</i></p> <p><i>Embed analytics into production systems.</i></p>
EXECUTE	●	<ul style="list-style-type: none"> + Complete model execution platform. + Models deployed in-database. + Automated execution processes. 	
MONITOR	●	<ul style="list-style-type: none"> + Robust analytics to enable visibility into model performance including retraining. + Champion/challenger modeling. 	

INTEGRATION POSSIBILITIES

Integrating SAS with Open Source

Open Source into
SAS environment

SAS into Open
Source environment

SAS IN OPEN SOURCE

- + **Base SAS** offers a Java object to incorporate a variety of external languages, including Python.
- + **SAS Procedures** can be **called from** open source tools.
- + The **Jupyter kernel for SAS** brings the power of SAS data manipulation and analytics capabilities to the Jupyter notebook.

WHY IS THIS IMPORTANT?

This allows data scientists to code in their language and interface of choice, while allowing SAS to **extend** open source applications with **productivity** and the ability to **scale to any data volume**.

Using SAS **in** open source can ease the transition of non-SAS users: calling SAS via stored processes/APIs from other programming interfaces is a simple way for open source programmers to access SAS.

SAS and Python in Jupyter Notebook

Top Jupyter Notebook: CAB Demo

TRAIN a random forest model on customer transaction data to predict which ones can be expected to be repeat customers

```
Args:
data: Name of the data set to train the model
numTrees: Number of trees to train in the model
numVarsToTry: Number of variables to consider for the splitting rule at each node
...
```

```
print "Training random forest from " + data + "..."
sys.stdout.flush()
sascode_uri = "http://joeloonix-sasbius2.na.sas.com:7980/SASBIUS/rest/storedProcesses/CABdemo/RandomForest/dataTargets/_WEBOUT"
headers = {"Accept": "application/xml,text/html", "Content-Type": "application/xml", "Authorization": "Basic c2F2ZGV0b2pwbWVXNzZ299"}
xml_payload = "<RandomForest><parameters><dataset>" + data + "</dataset><numtrees>" + str(numTrees) + "</numtrees><varstotry>" +
resp = requests.post(sascode_uri, headers=headers, data=xml_payload)
display(HTML(resp.text))
return
```

```
trainForest(data = "shoptrain", numTrees = 250, numVarsToTry = 250)
```

249	1120	0.158	0.163
250	139950	0.158	0.163

Bottom Jupyter Notebook: july31_python

```
ca = stat.reg(model="horsepower = length weight mwp mpg city", data=ca)
```

```
ca.DIAGNOSTICSPANEL
```

The SAS System

The REG Procedure

Model REG1

Dependent Variable: horsepower

Fit Diagnostics for Horsepower

The SAS System

Variable	Label	Units
length	Length	mm
weight	Weight	kg
mwp	Maximum wheel horsepower	kw
mpg	Miles per gallon (US)	mpg
city	City miles per gallon (US)	mpg

Using the ABC method search for the best subset of variables

It then uses the following details:

```
model = abc
```

```
abc select name;
```

```
proc abc;
```

```
data ca;
```

```
run;
```

Bringing SAS to R

RStudio interface showing R code, Environment pane, and a plot.

```
1 library("RCurl")
2 tempDir <- tempfile()
3 dir.create(tempDir)
4
5 myhtml <- getURL(url="http://joeloonix-sasbiws2.na.sas.com:7980/SASBIWS/rest/storedProcesses/CABdemo/RandomForest/d
6             httpheader=c(Accept="application/xml,text/html",
7             "Content-Type" = "application/xml", Authorization="Basic c2FzZGVBZGZpYXNzd29yZA=="),
8             postfields="<RandomForest><parameters><dataset>shoptrain</dataset><numtrees>100</numtrees><varstot
9             verbose = TRUE)
10
11 write(myhtml, file.path(tempDir, "sasout.html"))
12 rstudio::viewer(file.path(tempDir, "sasout.html"))
13
14
15
```

Environment pane:

Object	Class	Value
USER_FACTOR2	numeric	1271
USER_FACTOR1	numeric	1425
USER_FACTOR16	numeric	1398
USER_FACTOR10	numeric	1492
USER_FACTOR20	numeric	1547
USER_FACTOR11	numeric	1447
USER_FACTOR9	numeric	1412
USER_FACTOR17	numeric	1557
USER_FACTOR19	numeric	1610
USER_FACTOR18	numeric	1793

Procedure Task Timing:

Task	Seconds	Percent
Reading Data	2.18	22.14%
Training Forest	7.64	77.79%
Saving Model	0.01	0.07%

OOB vs Training

OPEN SOURCE IN SAS

SAS integrates open source within some software.

SAS® Enterprise Miner offers score code support for **6 different R packages** and allows users to **import any type of R code**. The **open source node** can also be used to import any open source model.

Allows users to create **ensemble models** using open source and SAS.

Models can be converted to score code for operational deployment from within a drag-and-drop interface. This results in improved **productivity**, **deployment** and **scalability**.

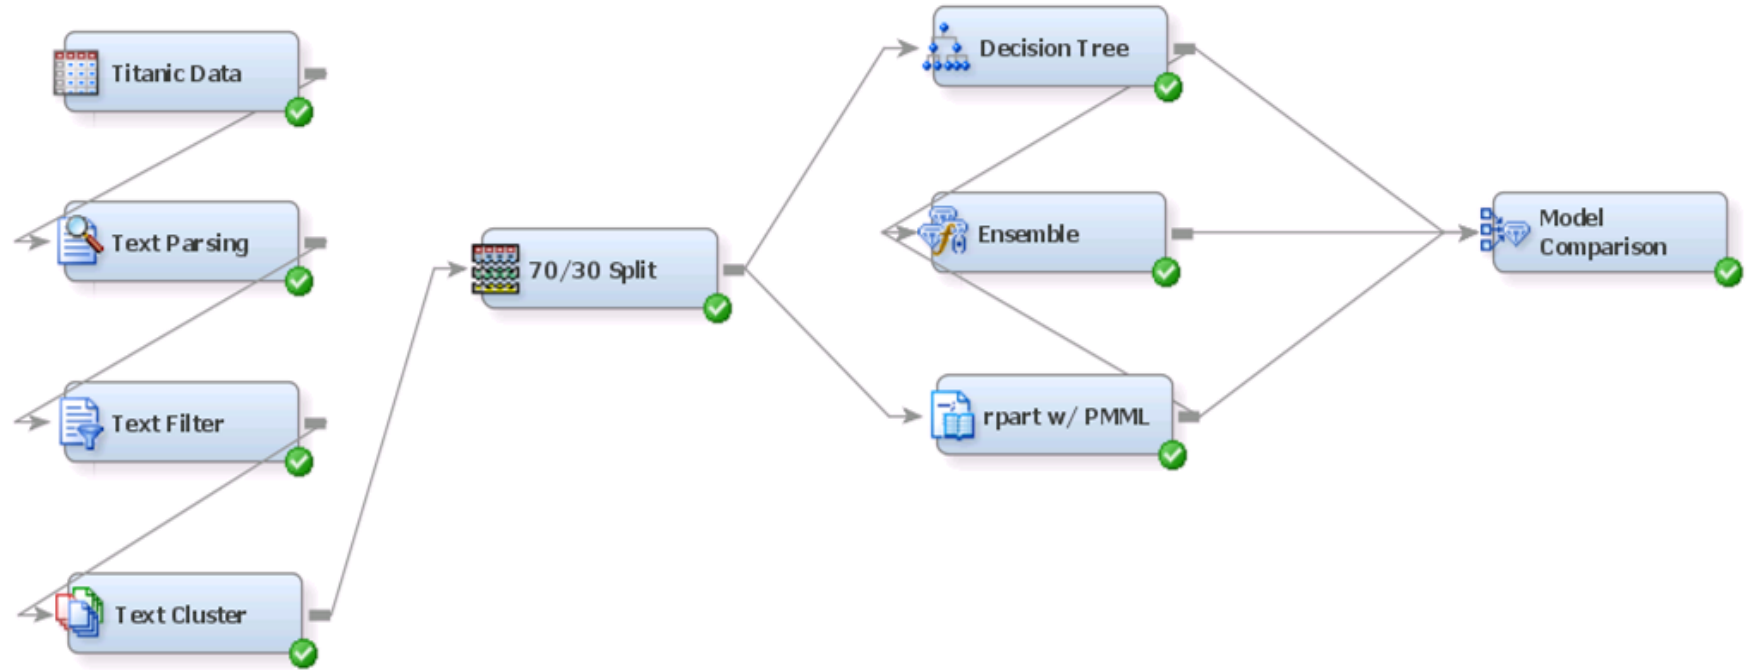

WHY IS THIS IMPORTANT?

Improve model lift and **performance** by creating blended models that **combine the best** of SAS and Open Source.

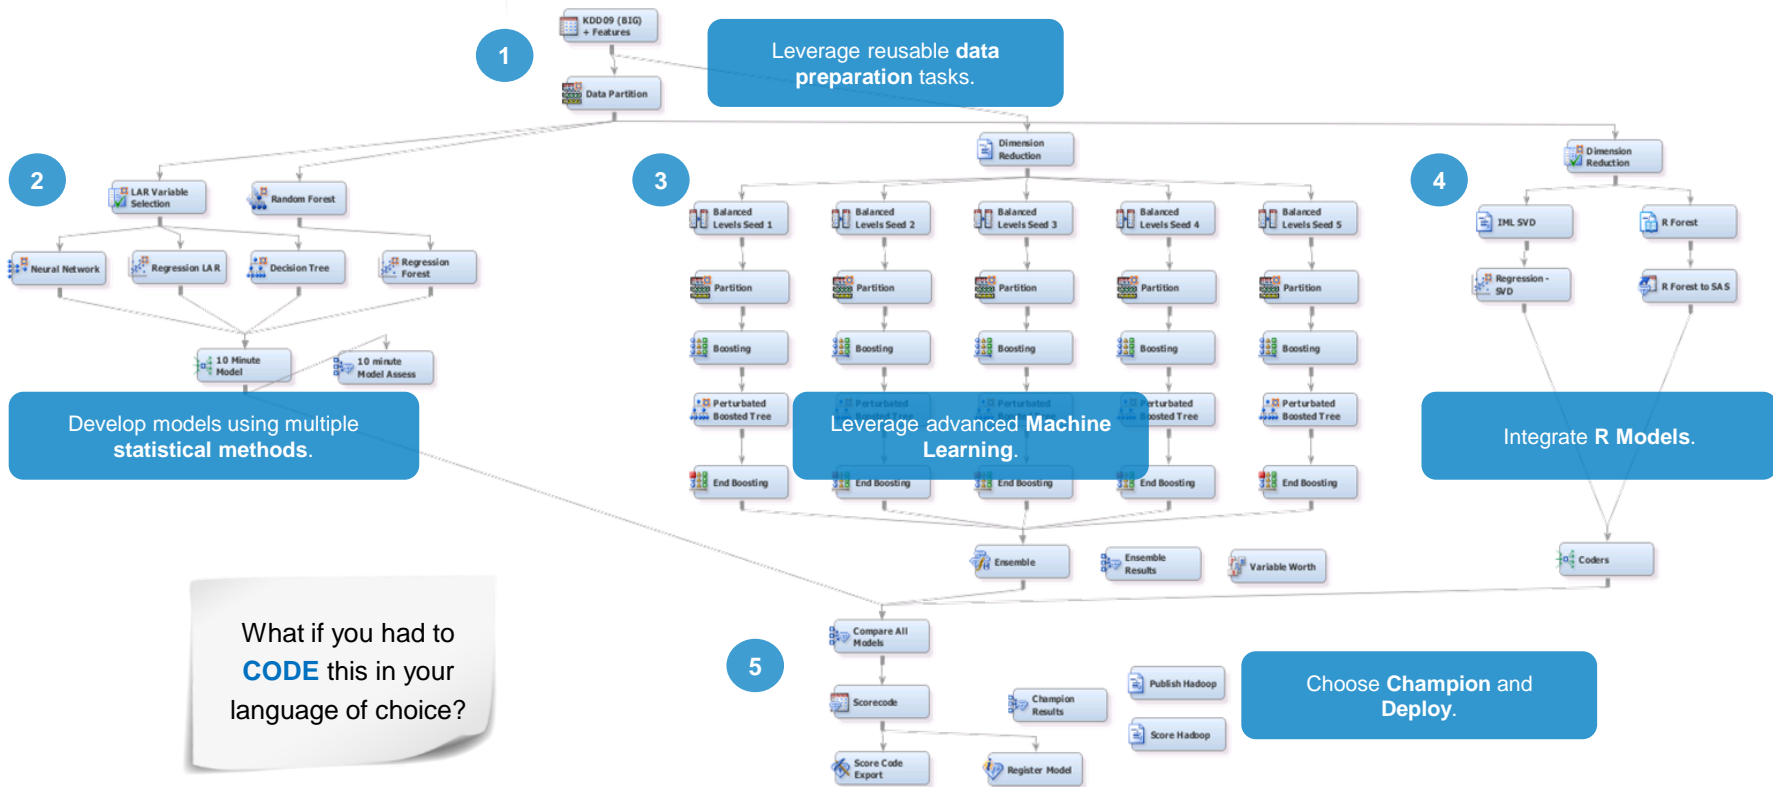

SAS automatically generates documentation capturing best practices, **promoting collaboration** and helping **reduce turnover risk**.

Facilitating Interoperability

A simple example

IN REAL LIFE

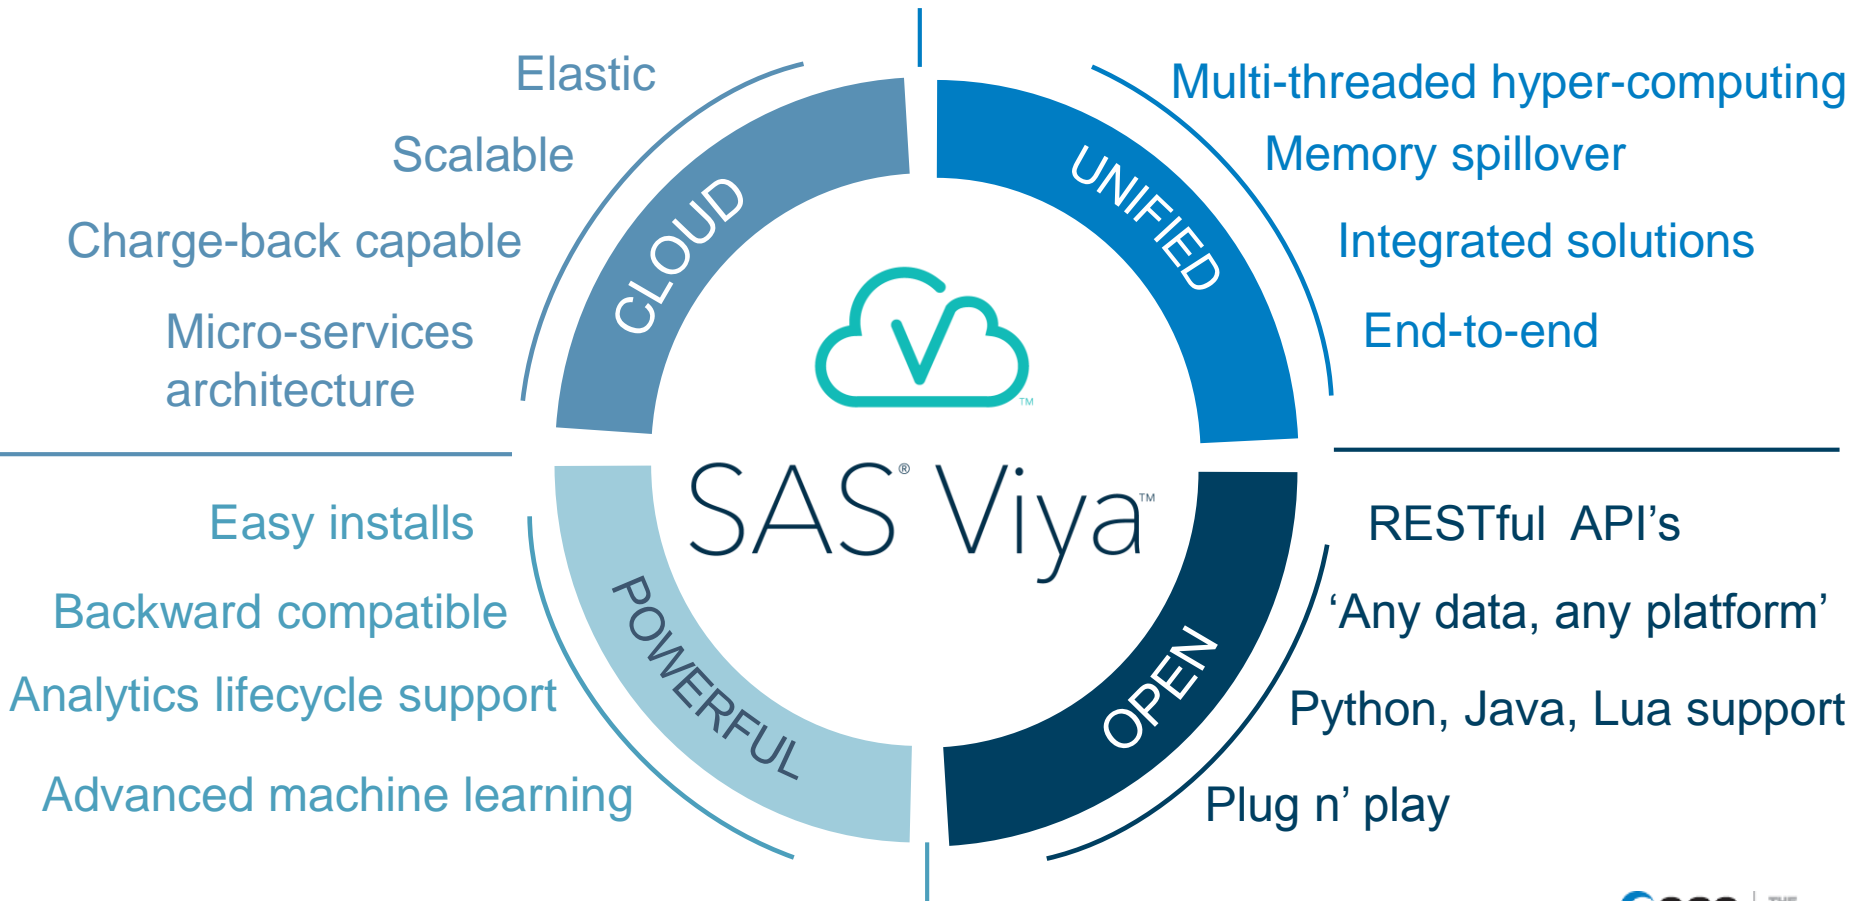

THE POWER OF MODELS

- SAS supports analytic model deployment with inventory, scoring, monitoring and retraining capabilities for **SAS and Open Source** models.

			 Supported PMML	 Non-PMML		
Inventory		●	●	●	●	●
Publish & Score	Batch	●	●	●	●	●
	In-Database	●	●	●	●	●
	Web Service	●	●	●	●	●
	Streaming	●	●	●	●	●
Monitor	●	●	●	●	●	
Retrain	●	●	●	●	●	

THE FUTURE IS NOW...

SAS AND OPEN SOURCE

SAS 9.4

EMBRACE

open source by including it
and leveraging it where we
can

EXTEND

open source by improving
its interoperability and
utility for the enterprise
