Executive summary of SAS' position on the landscape from Chartis's perspective

Financial Crime Risk Management

The SAS Fraud and Financial Crimes Framework is an end-to-end technology infrastructure for detecting, preventing and managing financial crimes across various business lines. The framework includes components for detection, alerts and case management, along with category-specific workflow, content management and advanced analytics.

The SAS solutions for financial crime risk management can accommodate either real-time or batch requirements for Anti-Money Laundering (AML), card fraud, first party and ring search social network analysis, internal fraud, wire and check fraud as well as insurance fraud. Advanced analytics, configurability, data management and reporting/dashboards are its key differentiators.

About Chartis Research

Chartis is the leading provider of research and analysis on the global market for risk technology. Its goal is to support enterprises as they drive business performance through better risk management, corporate governance and compliance. Chartis helps clients make informed technology and business decisions by providing in-depth analysis and actionable advice on virtually all aspects of risk technology.
