

When EG trumps Base SAS

1. Table Analysis Task or PROC Tabulate
2. How stylish can you get? Any which way with the Style Manager
3. Putting it together—the many options of the document builder
4. Bring on the prompts-Macro variables don't faze me any more
5. Merging was never so easy-PROC SQL is flexible while joining multiple tables that don't have key variables in common. The data step requires you to have common named key columns before you attempt a merge.
