

BETTER FORECASTING PROMOTES COMPANY GROWTH (Cont')

The ultimate goal at TD Meloche Monnex is to provide a fully functional platform-based system. "My objective is to implement a platform to develop the reports for all decision makers," adds Leroux. This will allow company executives to be more proactive and to evaluate information in more specialized and targeted ways without waiting for researchers to track down and provide data for one requested report at a time.

The company's next step will be an upgrade to SAS[®] Enterprise BI Server, which offers more flexibility and applicability in the use of the data reports. "Providing end users with metadata capabilities will be integral to the next phase of enhancing our BI environment. By allowing our users to access this level of information, they will be able to create their own reports when needed. Ultimately, we will provide more and better functionality and information to management executives. That's our goal." concludes Leroux.
