

# SAS PROGRAMMING FAST TRACK - ADVANCED

## Audience

This five-day course combines the courses SAS Programming III and SAS Macro Language. You learn the most effective ways to manage, manipulate, store & cleanse your data, indexing, multiple ways to combine and format your data, automate processes, dynamic and self-modifying code and creating data-independent code.

**Duration:** 5.0 days

**Course Description**    [\[ Click to register ONLINE \]](#)

---

This four-day intensive course builds on the concepts presented in the Fundamentals Fast Track - Fundamentals or SAS Programming II: Manipulating Data with the DATA Step. This course focuses on the following key areas:

- manipulating different forms of data
- combining data
- performing table lookups
- using permanent user-defined formats
- the SAS macro facility and how to design, write, and debug macro systems
- how programs with and without macro code are processed
- establishing and using a benchmark environment
- improving the speed of data access
- reducing program development time
- conserving data storage space
- reducing memory requirements.

## Prerequisites

---

Before attending this course you should have attended either the Fundamentals Fast Track - Fundamentals or the SAS Programming II course.

## Course Contents

---

### Accessing Observations

- creating sample data sets
- creating and maintaining indexes

### Combining Data Vertically

- appending raw data files
- appending SAS data sets

### Combining Data Horizontally

- joining data without a common variable
- combining summary and detail data
- using an index to combine data

### Using Lookup Tables to Match Data

- working with multidimensional arrays
- transposing data using the TRANSPOSE procedure

- working with DATA step hash tables (self-study)

### **Formatting Data**

- creating permanent formats
- creating formats from SAS data sets
- maintaining permanent formats
- creating informats

### **SAS DATA Step Views**

- creating a DATA step view

### **Updating SAS Data Sets (self-study)**

- modifying SAS data sets in place
- creating generation data sets
- creating integrity constraints
- creating and using audit trails
- validating and modifying data using Perl regular expressions

### **Introduction to the Macro Facility**

- purpose of the macro facility
- program flow
- course data

### **Macro Variables**

- introduction to macro variables
- automatic macro variables
- macro variable references
- user-defined macro variables
- delimiting macro variable names
- macro functions

### **Macro Definitions**

- defining and calling macros
- macro parameters

### **DATA Step and SQL Interfaces**

- creating macro variables in the DATA step
- indirect references to macro variables
- retrieving macro variables in the DATA step
- creating macro variables in SQL

### **Macro Programs**

- conditional processing
- iterative processing
- global and local symbol tables
