This intensive training course provides accelerated learning for those students who will administer the platform for SAS® Business Analytics. This course is for individuals who are comfortable with learning large amounts of information in a short period of time.

Learn how to:

- administer the SAS environment
- identify and report about the state of the SAS environment
- back up the SAS environment
- monitor and log SAS servers
- administer client applications
- administer users
- administer data access
- recognise and establish various security techniques
- secure data and other shared content
- troubleshoot metadata security
- move and promote metadata.

Who should attend:

SAS Platform Administrators.

Prerequisites:

Before attending this course, you should complete *SAS Platform Administration: Getting Started* or have equivalent experience.

Course contents:

Reviewing the Platform for SAS® Business Analytics

- exploring the platform for SAS Business Analytics overview
- exploring the client tier, middle tier, server tier, and data tier

Administering the SAS® Environment

- overview of administration tasks.

Determining the State of the SAS® Environment

- checking the state of SAS servers
- exploring the metadata server and repositories
- troubleshooting the metadata server.

Monitoring, Logging and Troubleshooting SAS® Servers

- overview of SAS server types
- monitoring SAS servers and spawners
- logging SAS servers and spawners
- troubleshooting SAS servers.

Backing up the SAS® Environment

- backing up metadata with the Backup Wizard
- exploring OMABAKUP
- scheduling backups
- backing up physical files.

Administering Client Applications

- exploring connection profiles
- using roles to control access to application functionality
- exploring SAS folders.

Administering Users

- defining regular users and groups
- defining administrative users
- giving users access to servers.

Administering Data Access

- registering libraries and tables in the metadata
- updating table metadata
- pre-assigning libraries
- troubleshooting data access.

Securing Metadata

- introduction to metadata security
- exploring metadata permissions
- exploring predefined ACTs
- securing content in the folder tree
- securing content outside the folder tree
- creating additional ACTs.

Moving Metadata

- replicating an entire repository
- promoting selected content.

Updating the SAS® Environment (self study)

- applying hot fixes to the SAS environment.

Learning More (self study)

- identifying SAS resources
- beyond this course.

Software addressed:

This course addresses the following software products:

- SAS Management Console
- Platform for SAS Business Analytics.
