

## INSTALLATION INSTRUCTIONS FOR HOT FIX 14JPS01 ON AIX 64BIT

The hot fix 14JPS01 addresses the issue(s) in 1.4 of SAS Foundation Services software on AIX 64bit as documented in the "Issue(s) Addressed" section of the hot fix download page:

<http://ftp.sas.com/techsup/download/hotfix/jps913.html#14jps01>

1. You must have SAS Foundation Services 1.4 installed on your system before applying this hot fix.
2. The hot fix must be installed using the same user-id who performed the initial SAS Foundation Services 1.4 installation.
3. You must have Administrator Privileges on your CLIENT or SERVER machine.
4. All currently active SAS sessions, daemons, spawners and servers must be terminated before applying this hot fix.

### INSTALLING THIS HOT FIX

1. Technical Support strongly suggests that you back up the files being replaced by this hot fix. You should always try to include the current date in the name of the backup file created to distinguish between versions of backup files. By doing this you will maintain a history of the file, which will be helpful when multiple iterations of a hot fix have been applied to the same file.

For example,

```
cp sas.foo.jar sas.foo.jar.07012006
```

where 07012006 is the date when the hot fix is applied.

The .<date> extension MUST be appended AFTER the .jar extension as it appears above.

The files that should be backed up for this hot fix are listed in Step #5 below.

2. Extract the contents of 14jps01r6.tar into a temporary directory, for example /tmp/14jps01r6.

```
$> mkdir /tmp/14jps01r6
```

```
$> cd /tmp/14jps01r6
```

```
$> tar -xf $HOME/14jps01r6.tar
```

where \$HOME is the location to where the tar file was downloaded.

The tar command will extract the following files to the temporary directory:

```
r64/Setup_AIX_Power
r64/media.inf
r64/setup.jar
```

3. Verify that Setup\_AIX\_Power has execute permission. If it does not, use the 'chmod' command to make it executable:

```
$> cd /tmp/14jps01r6/r64
$> chmod 755 Setup_AIX_Power
```

4. Initiate the installation wizard

```
$> export DISPLAY=<nodename>:0      <===== set your display
$> cd /tmp/14jps01r6/r64
$> ./Setup_AIX_Power
```

This will initiate the Java install wizard. Follow the prompts to complete the installation.

5. To verify the installation of the hot fix confirm that the file(s) in the location(s) below have been updated to the level indicated by the date provided:

```
<!SASHOME>/SASFoundationServices/1.1/jars/sas.svc.core.jar
Date: 02/20/07 (EST)
```

## Configuration and Deployment Instructions

After 14JPS01 is installed the following instructions should be performed for each SAS Web Application that is installed on your system.

### **Updating SAS Information Delivery Portal 9.1.3**

In order to implement this fix for SAS Information Delivery Portal 9.1.3 you should download and install hot fix **913WEBINFRAKIT10** or **later** from the following URL:

<http://ftp.sas.com/techsup/download/hotfix/idp913.html>

### **Updating SAS Web OLAP Viewer 3.1**

In order to implement this fix for SAS Web OLAP Viewer 3.1 you should download and install hot fix **31WEBOLAPVR09** or **later** from the following URL:

<http://ftp.sas.com/techsup/download/hotfix/wov31.html>

### **Updating SAS Web Report Studio 3.1**

1. Back up

<ISASHOME>/SASWebReportStudio/3.1/code/WEB-INF/lib/sas.svc.core.jar

per the instructions in #1 of the **INSTALLING THIS HOT FIX** section above.

2. Copy

<ISASHOME>/SASFoundationServices/1.1/jars/sas.svc.core.jar

installed by 14JPS01 to

<ISASHOME>/SASWebReportStudio/3.1/code/WEB-INF/lib

3. Configure and deploy SAS Web Report Studio by following the instructions for your operating system and web application server in the file

<ISASHOME>/SASWebReportStudio/3.1/deployment.html.

Note: If SAS Web Report Studio was originally installed using the SAS Configuration Wizard, there is a copy of the .war file in the <configuration-dir>/Lev1/web/webapps folder.

Also, if the application is configured for deployment in WebLogic, an additional directory containing an exploded copy of the SASWebReportStudio.war exists in the <configuration-dir>/Lev1/web/webapps/exploded folder. To maintain the same version of the .war file in all locations, it is recommended that you replace these files when reconfiguring this application.

4. Enable Report Web Services

If you previously deployed Report Web Services, you will need to re-deploy it. Please follow the instructions in the "Enable Report Web Services" section of the deployment.html document.

5. You must also complete the instructions in [Updating Query and Reporting Services 3.1](#) below.

### **Updating SAS Web Report Viewer 3.1**

1. Back up

<ISASHOME>/SASWebReportViewer/3.1/code/WEB-INF/lib/sas.svc.core.jar

per the instructions in #1 of the **INSTALLING THIS HOT FIX** section above.

2. Copy

<ISASHOME>/SASFoundationServices/1.1/jars/sas.svc.core.jar

installed by 14JPS01 to

<ISASHOME>/SASWebReportViewer/3.1/code/WEB-INF/lib

3. Configure and deploy SAS Web Report Viewer by following the instructions for your operating system and web application server in the file

<ISASHOME>/SASWebReportViewer/3.1/deployment.html.

Note: If SAS Web Report Viewer was originally installed using the SAS Configuration Wizard, there is a copy of the .war file in the <configuration-dir>/Lev1/web/webapps folder.

Also, if the application is configured for deployment in WebLogic, an additional directory containing an exploded copy of the SASWebReportViewer.war exists in the <configuration-dir>/Lev1/web/webapps/exploded folder. To maintain the same version of the .war file in all locations, it is recommended that you replace these files when reconfiguring this application.

4. You must also complete the instructions in [Updating Query and Reporting Services 3.1](#) below.

### **Updating Query and Reporting Services 3.1**

*(These instructions must be run when updating SAS Web Report Studio or SAS Web Report Viewer)*

1. Back up

<ISASHOME>/SASQueryandReportingServices/3.1/sas.svc.core.jar

per the instructions in #1 of the **INSTALLING THIS HOT FIX** section above.

2. Copy

<ISASHOME>/SASFoundationServices/1.1/jars/sas.svc.core.jar

installed by 14JPS01 to

<ISASHOME>/SASQueryandReportingServices/3.1

This completes the installation of hotfix 14JPS01.
