

Improve intelligence operations with data-driven insights and decisions

Unleash important data relationships and patterns from the noise.

Empower and improve intelligence officer performance with technology.

Act on information with easy-to-follow management workflows.

The Issue

Justice and public safety professionals conduct intelligence operations, covert policing and complex investigations to identify and address threats. The rapidly increasing volume, variety and velocity of available data strains limited intelligence resources - especially if the data is poor quality and spread among different data stores.

Without the right focus and timesaving tools to support tactical and strategic information gathering, these professionals can fail to identify and address threats that put the public at risk. To efficiently gather and manage data, they need timesaving intelligence management workflows and processes that fully use available data sets. By finding hidden connections and patterns, these professionals identify individuals, locations and networks whose activity harms the community - preventing criminals from operating under the radar.

With efficient ways to aggregate, access and analyze large data sets, public safety and intelligence agencies can quickly turn data into insights and action. This helps agencies better protect the community, prevent harmful events, build public confidence and minimize unnecessary risk for all involved.

The Challenge

Data-related process inefficiencies. Most law enforcement data is siloed, making it difficult to access and analyze. As they try to stitch together a complete picture of community threats, intelligence officers and analysts are forced to sign on and off multiple systems - a time-consuming, inefficient process. SAS® speeds and simplifies access to current, relevant data, so investigators know they have a complete picture of the issue at hand.

Lack of secure, 24/7 access to data and intelligence tools. Whether interviewing informants or conducting surveillance, investigators need mobile access to data systems so they can work efficiently on the street rather than being tied to the office. SAS provides secure, up-to-date access that's only available to those with appropriate permissions.

Cumbersome solutions without built-in workflows. Many intelligence solutions are hard to use or customize, and often lack workflow support. An intelligence solution from SAS is easy to use across all levels of the organization, with a browser interface that can be customized for specific roles, data and functionality. Built-in workflows help users navigate agency policies and procedures.

Our Approach

SAS provides an industry-leading technology platform that brings together large data sets and gives users a single view of the truth. With the power to analyze any given entity, our platform helps public safety and intelligence agencies:

- **Use key data resources more effectively** by providing investigators with access to reliable, accurate, high-quality agency data (both structured and unstructured). SAS automatically uncovers relationships and continuously processes data to find patterns of risks, turning data into timely insights.
- **Strengthen multi-agency coordination** by clarifying and aligning interagency mission, scope and data sources. With SAS solutions, agencies can develop collaborative strategies that achieve shared goals.
- **Respond to and prevent the most serious threats** by delivering complete, accurate insights at the right time. Powerful tools minimize labor-intensive tasks and investigative bottlenecks, speeding time to insight and action by law enforcement.
- **Harness advanced analytics** that improve performance and reduce risk by unlocking new insights and identifying patterns of escalating threats.

The SAS® Difference

SAS helps intelligence professionals protect communities and deliver results when time matters, whether working to prevent or solve a crime. Designed for law enforcement by public safety intelligence experts, our intelligence management solution provides:

- **Instant access to a single source of truth.** Our intuitive tools help you quickly analyze and visualize aggregated data to identify risks and mitigate potential harm, without technology distractions that frustrate users.
- **Powerful data visualization and reporting tools.** SAS presents data in easy-to-understand ways that speed decision making, keeping intelligence officers focused on delivering results rather than wrestling with data. Our platform also offers capabilities for what-if scenarios and questioning of the data.
- **Core intelligence capabilities through a single platform.** Choose from a wide range of SAS capabilities to meet new and evolving needs as your agency grows.
- **Global reach and compliance.** Deployed worldwide, SAS solutions can be configured to meet local standards and regulations of intelligence practice, collection, dissemination, and privacy policies and protocols.

THE SAS® ADVANTAGE

FIND MORE

- Access and analyze many different types and sources of information, including unstructured, big data sets.

DISRUPT MORE

- Quickly identify the most vulnerable people and those who threaten them by spotting hidden connections in the data.

PREVENT MORE

- Make better tactical and strategic assessments based on a broad view of what is happening in the field.
- Set strategies proactively based on situational awareness that provides a timely, comprehensive understanding of risk.

ENGAGE MORE

- Share analytical results through dashboards that transparently inform government leaders, community partners and citizens.
