

# How Trust Delivers

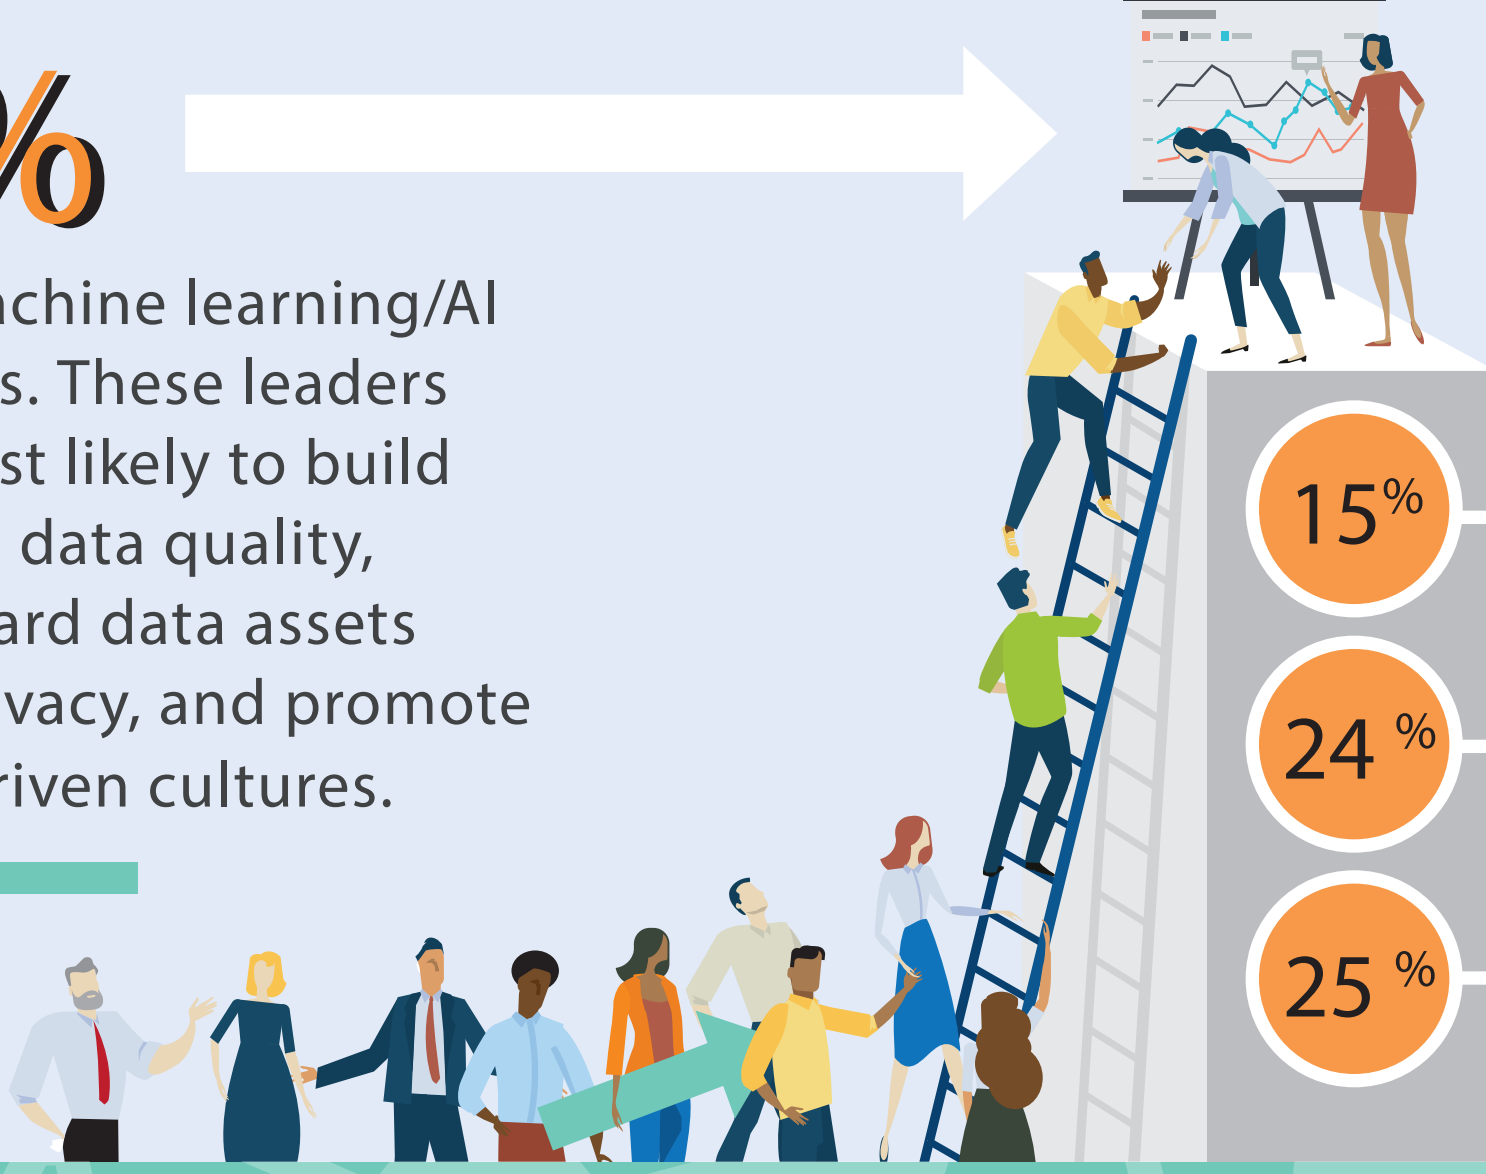

Value in Data, Analytics, and AI

We surveyed more than 2,400 business executives and managers to learn how they are progressing on their data and analytics journey. We discovered that those with the most mature practices are doing more to build a strong, multi-dimensional foundation of trust.

9%

Use machine learning/AI insights. These leaders are most likely to build trust in data quality, safeguard data assets and privacy, and promote data-driven cultures.

## Moving up the ladder

Tap advanced analytics in setting strategic direction

Use dashboards for tactical decisions

Use business intelligence and visualization tools for strategic decisions

## Trust in data grows from commitment to data quality

12%

Always trust data is up-to-date

9%

Always trust data is accurate

6%

Always trust data is complete

Just 1 in 5 routinely monitor, manage, and improve data quality as part of a formal data governance effort.

## Data quality takes leadership

33% have a CDO or CAO

People who work in organizations where there is a **chief data officer** or **chief analytics officer** are more likely to trust data, and more likely to report having the data they need to make decisions.

## Trust requires security

6 out of 10 organizations report good security practices, protecting data so their customers feel safe when they share information.

These organizations:

- 3 Have a data breach response plan
- 3 Track where sensitive data is stored
- 3 Know what sensitive data they collect
- 3 Train all employees on security risks

Some go further:

< 39% Use a security framework

> 37% Employ a chief information security officer

< 22% Use advanced analytics to predict risks

## Good privacy practices can deepen customer relationships

Just 4 in 10 businesses notify customers how their information is collected, used, and shared, and have internal controls over how employees use the data.

14% Aren't concerned with privacy

20% Notify customers about data collection and use

25% Have some data privacy measures but don't communicate them

## Analytics leaders foster a culture of data and experimentation

Leadership sends the message that data drives decisions.

>> 59%

Have company leaders who frequently seek data and analytics to support decisions

Training builds talent for a data-driven workforce.

>> 17%

Currently make training in data and analytics widely available to employees

>> 16%

Regularly assess workforce data literacy

Collaboration across functions builds a data-driven culture.

>> 21%

Train or place analysts in operational areas

>> 17%

Train line-of-business experts in analytics
