

You're focused on the community and growing your practice – despite not having the same resources as larger enterprise counterparts.

Balancing quality of care with escalating costs is a challenge.

## Quality and cost are both important

Based on the HIMSS 2020 Nursing Informatics Workforce Survey

**92%**

of executives agree

Hospitals consider quality of care over cost

**67%**

of clinicians agree

**80%**

of health care providers have implemented or plan to implement new analytics tools to better understand cost of care

## Stop sacrificing one for the other with analytics from SAS

SAS helps health care providers create a C4 culture. Key stakeholders – such as physicians, nurses, administrators, clinicians and researchers – are empowered with clarity around outcomes and operations, which sparks their curiosity and fosters collaboration. Ultimately, it's their creativity that drives solutions to improve quality of care and reduce costs.

**60%** reduction in post-operative infections

**80%** prediction accuracy in appropriate & timely patient discharges

**50%** decrease in median ED length of stay

**C4 Culture = Clarity + Curiosity + Collaboration + Creativity**

As a leader, you provide clarity. Your stakeholders do the rest. Clarity is when stakeholders always have access to accurate information about key areas where improvements are needed.

## OUR APPROACH

### Assembled Info

- EHRs
- Unstructured clinical data recorded by doctors and nurses
- Key metrics (post-surgical infections, lengths of stay, etc.)
- Patient survey data
- Weather data
- Patient demographics

### Added Insight

- Trends
- Correlations
- Triggers
- Predictions
- Artificial intelligence
- Composite AI

### Arranged for All-Hands Use

- Physicians
- Nurses
- Clinicians
- Researchers
- Patients (if applicable)

### Always-On Availability

- Easy to use
- Self-service
- Point-and-click investigation
- Mobile device and web portal accessibility
- Enter experience, observations, insight

Automated → Hands-Free Process → Agile Framework

## Start Small. Just Start.

Providing clarity doesn't have to be a painful, long, expensive project. Our approach is to start with a single, focused area (e.g., post-surgical infections). We provide clarity and foster a C4 culture around the initial area of focus.
