

Subprocessorsors

SAS' cloud services process various categories of data, including customer data and personal data. Where SAS hires a subcontractor to perform work that may require access to such data, they are considered a subprocessor.

Subprocessors are only permitted to access data in order to deliver services that SAS has hired them to provide; they are prohibited from using data for any other purpose. They are required to maintain the confidentiality of this data and are contractually obligated to meet strict privacy requirements that are equivalent to or stronger than the contractual commitments SAS makes to its customers in the SAS Data Protection Addendum (which is incorporated by reference in the SAS Universal Terms). Subprocessors are also required to comply with applicable data protection laws, including GDPR. These requirements include those related to implementing appropriate technical and organizational measures to protect personal data.

Subprocessors who have access to customer data and personal data are subject to heightened requirements. They must agree to the EU Standard Contractual Clauses (SCCs) for services for which SAS signs SCCs with its customers.

Subprocessors may perform work in any of the following capacities:

- Subprocessors who provide technologies to power certain SAS® Cloud services. Subprocessors identified for a specific service may process, store, or otherwise access customer data or personal data in the course of helping to provide that service.
- Subprocessors who provide ancillary services to support SAS Cloud. Subprocessors may process, store, or otherwise access limited customer data or personal data in the course of providing their ancillary services.
- Subprocessors who provide contract staff who work in close coordination with SAS employees to help support, operate, and maintain the SAS Online Services and in the course of doing so may be exposed to customer data or personal data. In such cases, customer data still resides only in SAS facilities, on SAS systems, and is subject to SAS policies and supervision.

The following is a list of SAS subprocessors. Note that any particular customer engagement could involve additional subprocessors (with disclosure to customer) for services unique to a particular customer's environment/licensing arrangement.

List of Subprocessors		
Company	Server Location	Function/Service
External Subprocessors		
Customers hosted in Microsoft Azure Environments:		
Microsoft Corporation and further subcontractors as outlined under https://www.microsoft.com/en-us/trust-center/privacy/data-access	Worldwide as preferred by customer at a variety of locations (EU/UK/USA/APAC)	Provision of cloud environment/ cloud infrastructure (IAAS)

List of Subprocessors		
Company	Server Location	Function/Service
