

Did you know...

# Should decisions really be automated?

Intelligent decisioning will automate and manage decisions across the MOD

A single solution, an open intelligence framework to develop and deliver mission analytics.

By managing, analysing and operationalising high volumes of data to automate thousands of daily decisions, apply sophisticated analytics to real-time interactions, SAS Intelligent Decisioning makes data driven smarter decisions and organisations more efficient.

**Trigger actions based on events in real-time. While ensuring version control, and testing and traceability of analytically driven operational decisions.**

- Business rules management
- Decision processing
- Real-time event detection
- Decision governance
