Ready to take your skills up a notch?

It's no secret that data science and analytical talent are needed at more and more companies. That's why I'm excited to be a new SAS user. From SAS tutorials to e-learning to free software for learning, there are a ton of free resources to help me grow. Accessing, downloading and using the material was even easier than I expected. Soon, I'll be ready to expand my skills and take it to the next level .

New here? Let me show you around.

I've been a SAS user for almost 12 years, and one of the things I love is that it's so easy to keep your skills up to date. SAS offers a variety of learning paths and training formats, so I can really work within my schedule and goals. I've taken some great courses online and at my local SAS training center. I can choose whatever training I need, when I need it.

Experience learning on your own terms.

The culture at SAS is one of opportunity and community. Our Business Knowledge Series features global experts who share how they use analytics to solve business problems. And since credentials are an absolute necessity today, we've developed the SAS Academy for Data Science, which offers advanced training and industry-recognized credentials in the areas of big data, advanced analytics and data science. The SAS Global Certification program also offers multiple credentials in a variety of fields. Invest in yourself - you can't afford not to.

Ready to take your skills up a notch?

Like a lot of companies out there, my organization faces new challenges that require more cross-functional collaboration. And leading an analytical team tasked with integrating and making sense out of our data isn't easy. Through customized on-site training, mentoring services and e-learning, SAS has helped me strengthen my entire team's analytical expertise skill set. Our learning couldn't have been more convenient and relevant.

Get your staff up to speed.

As a university director of statistics and analytics, my focus is on educating the next generation of analytical talent. I want to arm our students with the latest analytical skills and certifications that will lead them into successful data science careers. Partnering with SAS makes that so much easier. For instance, the SAS Global Academic Program has worked closely with us to create and deliver a SAS joint certificate program, and companies are jumping at the chance to offer jobs to our students.

Teaching SAS[®] just got easier.

I'm a bit frugal and always look for a good deal. SAS offers discounts on training, whether you're learning on your own or with a group, in the classroom or online. And they don't stop there - SAS offers a lot of free options that are great for supplementing my learning efforts. Bottom line: SAS wants to help us succeed with their products - and not break the bank in the process.

Open your mind. Not your wallet.

When I complete my degree, I want to land a great job. So in addition to using SAS in my coursework, I joined the SAS Analytics U Community and follow SAS social channels and e-newsletters. SAS offers a lot of discounted and free resources that help students like me get certified before graduation. Check out SAS Analytics U, and you'll see what I mean - the free SAS University Edition is just one tool I'm using to increase my hands-on experience with SAS.

Head to the front of the class.

One of the things I've enjoyed most as a SAS user has been participating in SAS users group events and online communities. It's great to network and connect with other SAS users, many of whom face similar business challenges. And I especially enjoy learning from other SAS users who are in different industries than mine. Making these connections has expanded my perspective and enhanced my SAS learning immensely.

Sometimes it's not only what you know.

My job can be tough. I'm responsible for my company's SAS environment and other enterprise software. That's why I'm so glad I'm not on my own. I have a centralized source for all things SAS, which makes it easy to find SAS documentation, implementation support and platform road maps. And if I need additional help, I have a single SAS point of contact who responds to me immediately.
