

# Haste makes waste? Not anymore.

High-performance analytics from SAS and Teradata deliver near-instant insights from data. You'll see the difference. Fast.

**Consider the radical changes it could make for five different industries:**

---

**Financial Services:** Instead of needing 18 hours to calculate portfolio risks for 45,000 instruments, what if you could do it in just 12 minutes?

**Insurance:** Rather than just updating profiles and pricing yearly, what if you could offer pay-as-you-go pricing based on actual driving patterns?

**Retail:** Instead of a one-size-fits-all pricing strategy and multiple markdowns, what if you could optimize pricing to get it right the first time?

**Health Care:** In lieu of just prescribing treatment after a disease occurs, what if you could prevent disease in the first place with personalized medicine?

**Telecommunications:** Instead of undetected failures, service disruptions and angry customers, what if you could detect failures and automatically repair them in real time?

High-performance analytics could change your business in ways that are just as drastic. Because it's not just a matter of doing things faster. It's a matter of being able to do more things in the time that you have—and do them better. The results could change your world.
